

Ausbeth Aguguo

Graphic Design, Web Development, AI and Data

I work where design meets software: research turned into visuals people can take in at a glance, websites and platforms built for real clients, and AI tools that explain data in plain language.

Research Communication

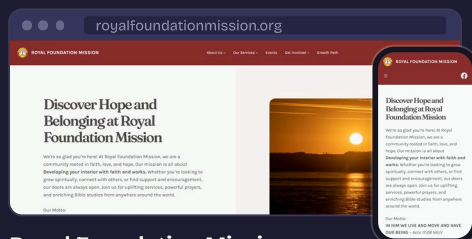

Graphic Designer Solent University, 2026

Roller banners and posters for a research topic presenting a Southampton case study. With lead researcher Dr May Owen, I turned its aims, methods and literature into a layout people can follow from across a room.

Websites and Platforms

Designed and built end to end

Royal Foundation Mission

Church website

Events, media and community information gathered into one site members can find their way around.

Open Hearted Prints

Custom apparel brand website

Bestsellers, the founder's story and a customer gallery, leading visitors into custom orders.

Lights On With Ad

Audio-visual brand website

A clear, polished site that introduces the brand and its services to new visitors.

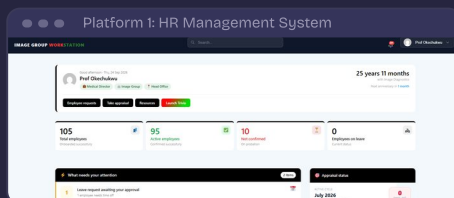

Clinirad-Consults

In-house developer, Apr 2025 to May 2026

A Human Resource Management System and an Academic Training Portal, built around how each department worked.

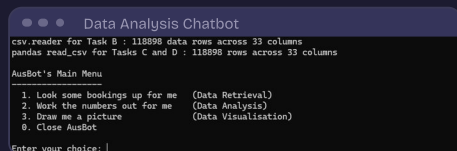

Over an hour to minutes

for processes that were previously manual

AI and Data

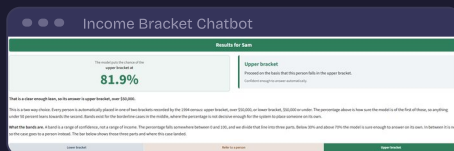

Python, Machine Learning and Data Visualisation

Data Analysis Chatbot

Coursework, MSc AI and Data Science, 2026

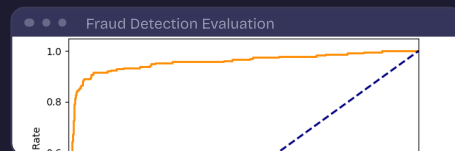

Retrieves, analyses and visualises hotel booking data.

Income Bracket Chatbot

Coursework, MSc AI and Data Science, 2026

Predicts income bracket, then explains the reasoning behind each prediction through a chatbot.

Credit Card Fraud Detection

MSc Computer Science dissertation, 2024

Unsupervised autoencoders and RNNs combined to flag fraud in a large-scale financial dataset.

Projects I'd love to work on

- Posters and banners
- Leaflets and brochures
- Event and conference materials
- Social media graphics
- Video editing
- Websites and landing pages
- Mobile apps
- UI and UX design
- Research communication
- Data analysis and visualisation
- Dashboards
- AI and machine learning prototypes

Toolkit

- Design: Canva, CapCut
- Web: HTML, CSS, JavaScript, PHP, WordPress, React
- Data and AI: Python, SQL, TensorFlow, Jupyter
- Study: BSc Software Engineering (Nigeria), MSc Computer Science (Nigeria), MSc Applied AI and Data Science (current, United Kingdom)
